

21 June 2021

A note from MasterForm...

At MasterForm we are constantly researching, developing and refining new ideas to ensure that the products we supply are of the highest quality, technically sound and priced affordably.

In light of these continuing improvements - we will be phasing out the Certification of all MasterForm Cast-in and Post-fix Hobs (Engineered without Reinforcement) from 1 July 2021.

This innovative change will allow us to maintain our competitive pricing in the midst of rising steel prices and will become the first step in the transition to our new innovative hob and leg system to be announced later this year.

While the price fluctuation of steel might be volatile and unpredictable, receiving a top-tier product and service from our team will always be commonplace which is why we are still seen as the Australian leader in formwork technology.

Regards,
Team MasterForm

HOB UPDATE FAQ'S

Why are you discontinuing the Certification of hobs now?

As the Australian leader in formwork technology, we are continuously refining our processes and products to better assist formworkers and builders stay on budget, achieve faster pour cycles and maintain the quality finishes demanded by modern developments.

We are introducing our new, innovative hob system very soon and this is the first step towards that transition.

What does this mean for my live project?

Nothing will change. Our hobs are still the strongest on the market and the build quality of the hob is not affected by this change.

Any required hob engineering will need to be undertaken by the Project Engineer..

Can we order your engineered hobs after 1 July 2021?

No, it is our intent to discontinue this product line.

If you feel your project has extenuating circumstances, please contact us to discuss options.
